

After a lot of deliberation and research into the pros and cons of supercharger versus turbo I decided that the way forward for my 400 Chimaera was definitely supercharger , enter David Harvey and SC Power.

I decided in my wisdom I would fit the kit myself which I did with vast quantities of advice from David . Fitting the kit is not a problem if you take your time and follow the instructions . The fit is excellent and the kit contains everything you will need just add a decent tool kit and a couple of brain cells.

The difference the kit has made to performance is amazing, the power delivery is smoother than before totally progressive with no surge or hesitation. The abundance of available power everywhere in the rev range with increased power over standard from low revs growing stronger as the revs rise to a howl over 3000 rpm best thing I ever did and comforting to know that the engine is safe with this system. I can't recommend it enough.
